Direct Black 22

The direct black dye is the most commonly preferred colouring for paper industries. We provide this dye in liquid form and the variation that we offer in the dye is 2200%, 1600%, 1200% and 800% black VSF.

The direct black 22 dye is skin friendly and hence can be safely used in manufacturing different type of fabric material in various colours.

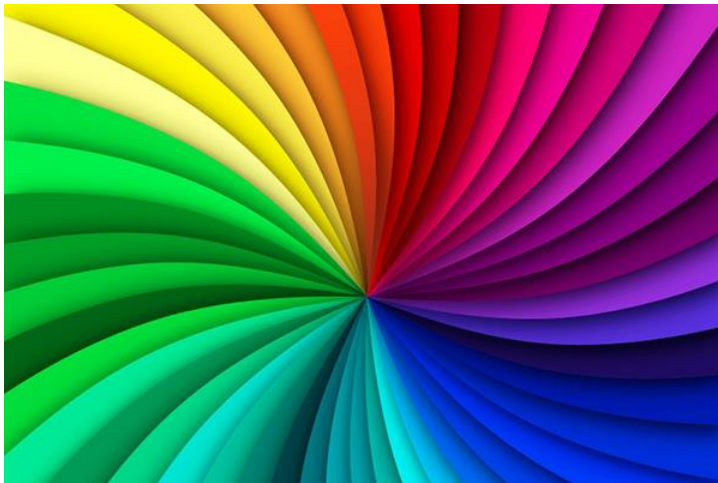

Molecular Formula Developed

Direct Dyes

The direct dyes can be used directly on the substance. They give bright shades when used on cotton and linen and even they can be applied on other materials like rayon, silk and woolen materials. The direct dyes we make are water soluble and can be easily applied on the substance. They do not easily wash away from the substance on which it is applied.

Acid Dyes

We offer a wide array of acid dyes that are water soluble and can be effectively used on the fibers like wool, nylon and silk. The acid dyes have strong complex chemical reactivity that makes them easily soluble

in water. They are named after the mild acid that is used in the dyeing process. If the substance is dyed with acid dyes then the washing has to be done in cold water.

Fiber Reactive Dyes

We manufacture a large spectrum of fiber reactive dyes. They have great fastness property to become effectively bonded on the material.

The [fiber reactive dyes](#) are made from natural ingredients and latest technology. The offered dyes has chemical reaction with the fiber and makes it a part of the fiber.

Textile Reactive Dyes

This type of dye is used mainly in textile industries to colour the textile products. They are presented in both powdered and paste form. The variety of textile reactive

dyes is offered at the most competitive price range and gives excellent final end result. The quality of dyes that we offer is not just famous in the domestic market but is also applauded in the international market.
